

# AI SERVICES: SYSTEMATIC INTEGRATION OF ARTIFICIAL INTELLIGENCE INTO BUSINESS OPERATIONS

Artificial intelligence technologies offer numerous opportunities for businesses, but their effective practical application requires systematic and high-quality integration into business processes. ACTUAL I.T. consulting services provide companies with a comprehensive approach to AI integration, covering the entire lifecycle of AI technologies – from identifying needs, solution planning, implementation, configuration, and customization, to operational

maintenance. All services follow best practices, particularly adhering to security standards in artificial intelligence usage.

ACTUAL's experts assist businesses in integrating artificial intelligence into their operations or managing the entire implementation process. This support fills gaps created by shortages in internal staffing for deploying new technologies. Consulting services can be combined with the implementation of solutions and services provided by the entire ACTUAL I.T. group, although individual consulting services are also available for supporting third-party implementations.

## CONSULTING SERVICES FOR AI TECHNOLOGY INTEGRATION

- Integration of artificial intelligence into company business processes.
- Selection of appropriate AI technologies and large language models.
- Preparation of suitable infrastructure or cloud-based AI services for business use.
- Consultation on preparing data and documents for AI technology usage.
- Advice on designing workflows combined with AI technologies.
- Preparation of pilot projects tailored to specific AI use cases.

## CONSULTING SERVICES FOR SECURE AI USAGE

- Gap analysis of existing AI systems usage.
- Guidance on AI system implementation for compliance with the EU AI Act / ISO 42001.
- Assistance in conducting risk assessments.
- Technical audits of security and vulnerabilities.
- Data protection impact assessments in line with GDPR.
- Data protection impact assessments according to the AI Act and ISO 42001 standards.
- Training on AI security topics.

### SUMMARY:

**ACTUAL I.T. group's artificial intelligence consulting services bridge the gap between technology and operational usage within business processes. They ensure confidentiality, security, and compliance in technology usage, allowing companies to achieve sustainable and compliant integration of new technology.**
