# PRO.CLOUD AI –
ARTIFICIAL INTELLIGENCE SERVICES IN PRIVATE CLOUD

Pro.Cloud AI services enable the use of artificial intelligence-based solutions in a securely protected private server environment (private cloud or on-premise). Companies can easily upgrade to artificial intelligence functionalities integrated with existing information systems, business documents, and data, without concerns about data security and privacy.

Pro.Cloud AI services allow optimal utilization of hardware such as servers, AI accelerators (NPUs), memory systems, networking devices, and software solutions. They are designed to be scalable and reliable, thanks to geographically dispersed server clusters located in separate data centers. Moreover, they are managed using top-tier infrastructure management tools, ensuring efficient handling of AI workloads.

KEY FEATURES OF PRO.CLOUD AI SERVICES

PRIVACY OF USE

Services enable completely private usage of AI solutions. Available in a private cloud located in geographically separate, certified data centers within Slovenia. Each client receives their own (informationally separate) virtual instance of the AI environment. Upon request, the same infrastructure environment can be provided and managed within clients' private data centers.

SECURITY FIRST

Built on the latest developments and standards in information security, fully compliant with the new ISO 42001 standard (AIMS Artificial Intelligence Management System) and EU AI ACT guidelines.

FLEXIBILITY TO MEET BUSINESS NEEDS

Pro.Cloud AI services are modular, offered as Virtual Infrastructure as a Service (IaaS), AI platform as a service (AIaaS; AI Backend), or hosted software solutions (SaaS). Initial SaaS offerings include the CHATY conversational assistant and an AI-powered planning solution. Companies can also deploy their own AI solutions within the Pro.Cloud AI environment.

TECHNOLOGICAL FLEXIBILITY

Various technological components can be utilized upon agreement, such as different Large Language Models (LLM), machine learning tools, and other software tools for establishing AI-based services.

FLEXIBLE PRICING MODELS

Provide a cost-effective alternative to high initial and operational costs typically associated with AI solutions. Companies can gradually introduce various AI services without significant upfront fixed costs.

PREMIUM SUPPORT AND CONSULTING

Upon request, Pro.Cloud AI can be complemented with advisory services for planning and implementing AI business solutions, and services to establish security policies for AI usage. Additionally, a professional call center and 24/7 service management options are available.

SUMMARY:

Pro.Cloud AI services offer secure and trusted implementation of artificial intelligence technologies in a business environment. Services are fully hosted within the Republic of Slovenia or within clients' private data centers. The services support the entire lifecycle of AI solution usage and management while providing clear cost control.
